OTHERS	Seawater algae, small amounts of coconut blossom sugar and date sweetener, chia seeds, small amounts of linseed, herbal tea, still water

EAT LESS OF THESE IN DE_XISE

PORK	Among other things, meat contains phosphorus-containing compounds which, as phosphoric acid, can strain the acid-base balance.
DAIRY PRODUCTS	Raises hyperacidity and mucus in the body, especially in the digestive organs. This not only hinders detoxification, but also makes weight loss more difficult.
SOY PRODUCTS	Please have rather small amounts of tofu, tempeh, soy sauce and miso since they have a similar effect as dairy products possibly influencing your metabolism.
ALCOHOL	Contains many calories and keeps the liver busy with the breakdown - but the liver should rather focus on detoxifying the organs.
SMOKING	Less or even no smoking would of course be a welcome relief for your body during de_Xising, because smoking increases the level of oxidative stress.
SUGAR, WHEAT PRODUCTS	Empty carbohydrates that neither satiate nor nourish the body are a no-go. They, just like sugar, raise the the blood sugar level instantaneously and this definitely prevents fat burning.
FRUIT AND VEGETABLE WITH HIGH STARCH AND SUGAR	For example, potatoes, sweet potatoes, pumpkin, banana, honeydew melon are best only in small quantities.
GLUTEN-CONTAINING GRAINS	Especially wheat. Original grains such as spelt, einkorn, emmer, kamut, rye & barley are allowed in small quantities during the build-up phase - but not in the form of bread. Too high a gluten content of mainly highly cultivated types of wheat sticks to the intestines.
